

Only **270** days ago,

Some say that without embryonic stem cells, we are depriving science of solutions to debilitating diseases. But after a decade of research, embryonic stem cells have not helped a single human being. And they come with a hefty price tag: they are only obtained by destroying a living human embryo. An embryo like Joshua, 270 days ago. Meanwhile, adult stem cells have helped thousands of

Joshua was just an **embryo**.

people including patients with Parkinson's disease, spinal cord injury, sickle-cell anemia, heart damage and many other conditions. And these stem cells are readily available, found in bone marrow, umbilical cord blood, skin, fat and other tissues and organs. Stem cell research is finding solutions. Adult stem cell research. Science does not have to kill in order to cure.

**Adult Stem Cell Research. Let's Find Cures
We Can **All** Live With.**
